

Banking Transaction Management System (BTMS)

Database Testing

TEST STATUS REPORT

1. Scope

Database

2. Test Environment

Item	Value
Operating System	Windows 11
Database	MySQL — Banking Transaction Management System
Application Module	Customers, Accounts, Transactions, Fees, Branches, Employees
Bug Tracking	Jira — BTMS Space (BTMSB)

3. Status of Test Cases

Metric	Count
Total number of Test Cases	119
Number of Pass test cases	103
Number of Fail test cases	16
Number of Blocked test cases	0
Number of Not Executed test cases	0

Test Case Results (Total: 119) — Executed: 119 (103 Pass / 16 Fail) · Not Executed: 0 · Blocked: 0

4. Active Defects by Severities

Metric	Count
Total number of Defects	16
Number of Highest Defects	0
Number of High Defects	11
Number of Medium Defects	5
Number of Low Defects	0
Number of Lowest Defects	0

5. Testing Types

- Functional Testing
- Database Testing

\

6. Status / Summary

Test execution is 100% complete, covering all 119 planned test cases. Of the executed test cases, 103 passed and 16 failed, resulting in an 86.6% pass rate and a 13.4% failure rate. There are 0 Blocked and 0 Not Executed test cases. All 16 failed test cases are associated with active Jira defects. The current defect distribution includes 11 High-severity defects and 5 Medium-severity defects, with 0 Highest, Low, or Lowest-severity defects.

PRIORITY RECOMMENDATION

Fix the **11 High-severity defects first**, as they represent significant functional and data-integrity issues that may affect core banking operations. After resolving and retesting these issues, prioritize the **5 Medium-severity defects**. A full regression cycle should then be performed to confirm that the fixes have not introduced new defects.
